# Introduction to Computing and Java

# **Programming Coverage**

# **Course Design**

- Instead
  - Lecture not a rehash of the book but covers same concepts from a different perspective
  - Lots of programming activities

# Intro to Computing

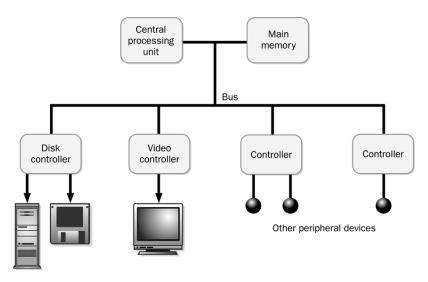

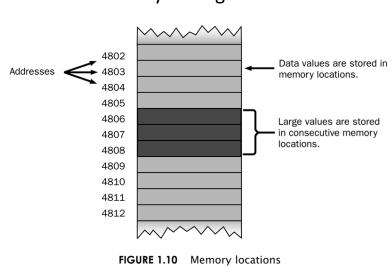

FIGURE 1.9 Basic computer architecture

# The CPU

- Fetches instructions from main memory
- Carries out the operations commanded by the instructions
- Each instruction produces some outcome
- A *program* is an entire sequence of instructions
- Instructions are stored as *binary numbers*
- Binary number a sequence of 1's and 0's

#### Main Memory – a big list of addresses

#### Knowing About: Computer Hardware

- **Bit**: smallest and most basic data item in a computer; represents a 0 or a 1
- Byte: a grouping of eight bits
  - E.g., 00010001
- Word: a grouping of one or more bytes

1 bit 2 items	2 bits 4 items	3 bits 8 items	4 bits 16 items	5 bits 32 items
0	00	000	0000	00000 10000
1	01	001	0001	00001 10001
	10	010	0010	00010 10010
	11	011	0011	00011 10011
		100	0100	00100 10100
		101	0101	00101 10101
		110	0110	00110 10110
		111	0111	00111 10111
			1000	01000 11000
			1001	01001 11001
			1010	01010 11010
			1011	01011 11011
			1100	01100 11100
			1101	01101 11101
			1110	01110 11110
			1111	01111 11111

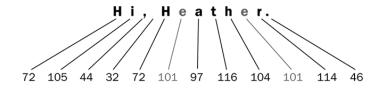

FIGURE 1.7 The number of bits used determines the number of items that can be represented

Patterns of bits could represent integer numbers

Unit	Symbol	Number of Bytes
byte		2 <sup>°</sup> = 1
kilobyte	KB	2 <sup>10</sup> = 1024
megabyte	MB	2 <sup>20</sup> = 1,048,576
gigabyte	GB	2 <sup>30</sup> = 1,073,741,824
terabyte	ТВ	2 <sup>40</sup> = 1,099,511,627,776

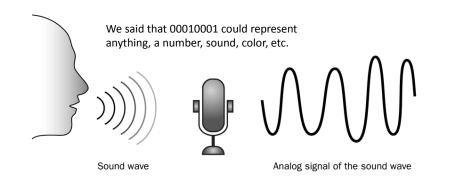

FIGURE 1.11 Units of binary storage

#### Bits could represent characters

#### Bits could represent sound

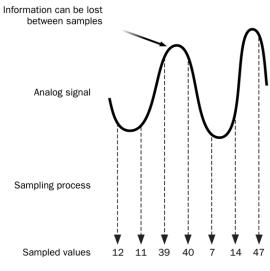

FIGURE 1.4 Digitizing an analog signal by sampling

# Bits can represent colors

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47
48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63

#### Bits can represent instructions

• 110110

- might be the instruction to add two numbers

- 110100
  - might be the instruction to increment a number
- · Called binary code
- Assembly Code Mnemonics

Loop: L.D ADD.D S.D L.D ADD.D	F0, 0(R1) F4, F0, F2 0(R1), F4 F6, -8(R1) F8, F6, F2	; Drop DADDUI and BNEZ
S.D L.D ADD.D	-8(R1), F8 F10, -16(R1) F12, F10, F2	; Drop DADDUI and BNEZ

#### The Fetch-Decode Execute Cycle

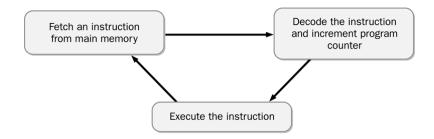

FIGURE 1.14 The continuous fetch-decode-execute cycle

#### Layers of Programming Languages

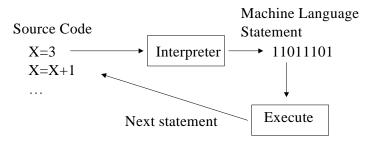

High-Level Language	Assembly Language	Machine Language
a + b	ld [%fp-20], %o0 ld [%fp-24], %o1 add %o0, %o1, %o0	 1101 0000 0000 0111 1011 1111 1110 1000 1101 0010 0000 0111 1011 1111 1110 1000 1001 0000 0000 0000 

FIGURE 1.21 A high-level expression and its assembly language and machine language equivalent

A program called a **compiler** translates from high-level to machine language

#### Interpreter

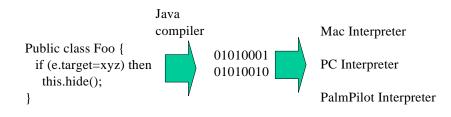

• Compiling combined with execution

Often easier to program, debug, but will run slower than compiled programs

# Java – Both Interpreted/Compiled

# Somewhat of a simplification with JIT compilers

# Programming

- A program is a list of instructions for the computer to follow
- Algorithm
  - Sequence of steps to solve a problem
  - Example: Searching a list of names for a number
    - 1. Atto, Tom (6-1102)
    - 2. Attrick, Jerry (6-9089)
    - 3. DeBanque, Robin (6-0022)
    - 4. Dente, Al (6-8722)
    - 5. Fresco, Al (6-8723)
    - 6. Guini, Lynn (6-8834)
    - 7. Oki, Kerry (6-9213)
    - 8. Wright, Eaton (6-4441)

#### Pseudocode

- Somewhere between English and actual code to help figure out how to write the actual code
- Binary search pseudocode
  - Given a list of names
    - · If the list is empty then target not found
    - Otherwise:
      - Get the name in the middle of the list
      - If this name is the same as the target, then the target is in the list
      - If this name is alphabetically before the target then
        - » Repeat the process on the bottom half of the list
      - If this name is alphabetically after the target then
        - » Repeat the process on the first half of the list

#### Java Example

 In-class: Entering and running a "Hello, World" program using DrJava

```
File: HelloWorld.java
/*
 * Normally you would put your name and assignment info here
 * This program prints out "Hello, World".
 */
public class HelloWorld
{
    public static void main(String[] args)
    {
        System.out.println("Hello, world!");
    }
}
```

# Questions

- What is pseudocode?
- What class activity/assignment is OK to work on with another student, and what class/activity should be completed individually?
